1 The DataFace Application

This is a basic guide for retrieving the DataFace application in it current status. Please keep in mind the application is still very much in a beta stage and large portions of it will change over time. Beyond successful development the most important item for you as a StakeHolder is how do you get DataFace and from where.

0.0.1 Get DataFace

> To view the current DataFace project you may download the latest APK to use on your Android based device: Dataface-release-unsigned.apk

> To view the latest development source code of this product, please take a look at the online GitHub repository: DataFaceProject

> To clone this project using git:
> git clone https://github.com/trentonknight/DataFaceProject.git

> To comment or see status updates on this project view the wiki here: DataFace: An attempt to create a Object based learning tool.

For now DataFace is being distributed as whats referred to as Open Distribution (*Open Distribution* 2013). Once the application has reach full maturity and is releasable to the general public it will be licenced and distributed on Google Play (*Your Apps On Google Play* 2013).

0.0.2 Additional Help

Additional details may be found in the Handout from our previous Google Hangout on Air meeting here: Presentation of DataFace as well as a paper I have written regarding its current development Regis University Senior Capstone Scholarship Paper.
